

SOLAGLAS SYSTEM INTEGRATION

With over 140 years of expertise in glass and glazing – and with a turnover in excess of £150 million – Solaglas employs around 1,500 people in the UK and is organised into four primary operating divisions.

THE CHALLENGE

Solaglas has an application called Windowcare that processes information such as product pricing, property surveys and engineer callouts. This application integrates, via BizTalk, with internal and external systems to provide automated data feeds and cross-system workflows. Solaglas maintained this framework internally but chose to find a reliable technology partner to take care of both current and future system requirements.

OUR ACTIONS

Objectivity maintains and enhances the BizTalk middleware layer for Solaglas. We guarantee that data feeds are processed in a timely and efficient way. Ensuring that invoice and order processing operate seamlessly is also our responsibility.

A formal induction plan ensured a seamless transition from internal development staff to our support team. Along with fixing issues, our support programme includes short term tactical changes and development initiatives.

THE RESULTS

Objectivity has maintained and extended the BizTalk framework at Solaglas since the start of 2009 and it continues to serve them as a key technology. In addition to supporting this middleware, Objectivity has made many enhancements and improvements to the framework. We also provide a technical consultancy service that has identified a number of general system improvements.

Our engagement provides Solaglas with a quality service and a significant reduction in operational expenses.

KEY ACHIEVEMENTS

- Took on responsibility for the core integration platform
- Reduced operational costs
- Automated and streamlined system release and deployment processes

CORE TECHNOLOGIES

- BizTalk Server
- SQL Server
- T-SQL
- XML & XSLT
- C#
