

# Quality Team Manifesto

## Objective

As Quality Engineers, we want to deliver the highest quality software that meets our customer's needs. Satisfaction is essential for us, for all involved, achieved by self-development, providing quality and doing it all with passion and fun - **Win-Win**. We really enjoy what we do.

## Acceptance Criteria

Test scopes and methods are tailored to customer needs and the specific product. All documentation delivered by the customer are reviewed, verified and accepted by all our team members. We are keen on knowledge and experience exchange, both inside and outside the company. We're not only participants, but also organisers of many events related to self-improvement. When it comes to work organisation, we maximise our efficiency and effectiveness through **Agility** and dedication, whilst never forgetting about a good work-life balance.

## Scope

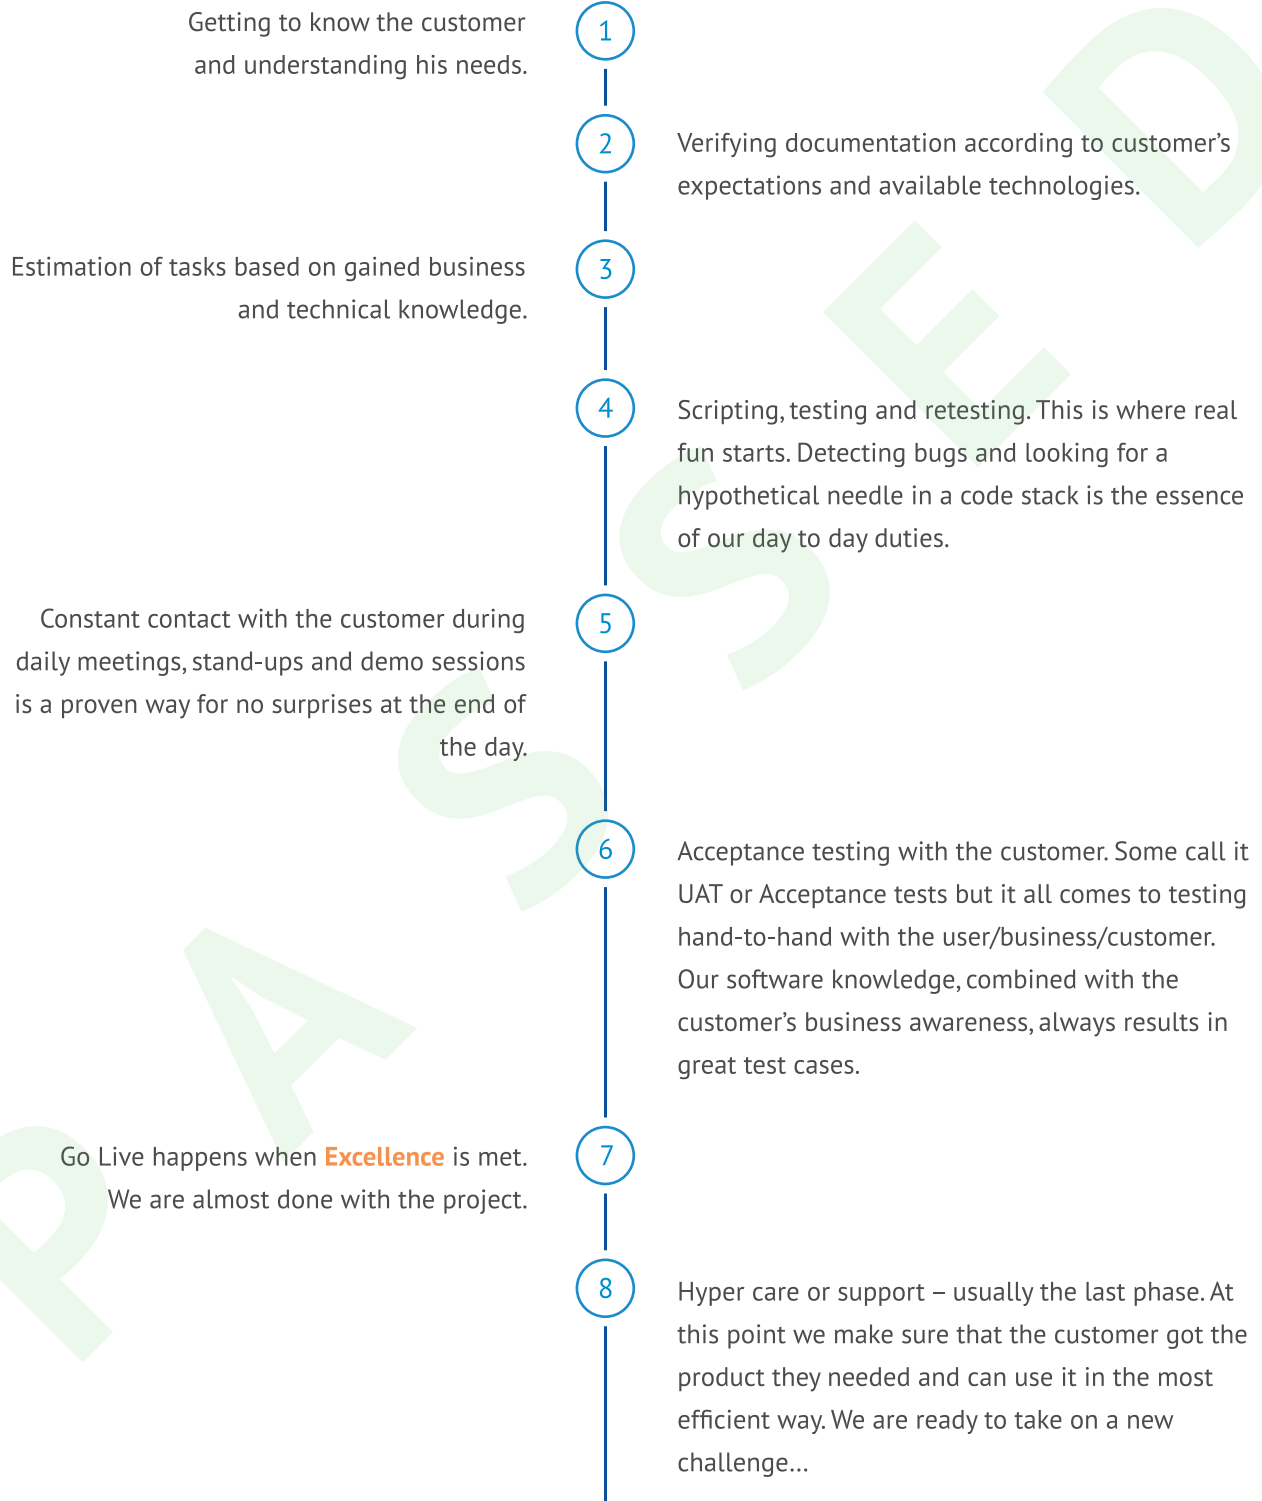

To reach our objective we encourage continuous improvement for all our Guild members. We share knowledge between us and keep good relationships with other teams as we have a common goal which is superb product. We don't only understand specifications provided to us but also our customer needs so that we can exceed their expectations. We are aware of a fact that a good atmosphere means good quality, and good quality is a happy customer that's why we spend time together sharing our interests and hobbies with our colleagues. **Integrity** can do magic!

## Pre-requisites

Our work starts long before the first test execution begins. As Experienced Individuals, we form a united group of **People** with a variety of skills and competences that are both required and suitable for the project. We are focused on being up to date with new technologies and knowing trends in testing world. But the team cannot work without tools, a good plan, communication, trust, and a clear knowledge of the customer's expectations. We make sure that all those pre-requisites are fulfilled before the project starts.

## Steps

By the way ...  
**Q**Ardians stand for **Q**UALITY!
